

VEDIKA BANG

☎ 843-743-1326 ✉ vedikabang@gatech.edu [in LinkedIn](#) [GitHub](#)

Summary

Actively seeking a full-time role in Cybersecurity from Jan '24.

Education

Georgia Institute of Technology

Aug 2022 – Dec 2023

MS in Cybersecurity (GPA: 3.63/4.0)(Highest Honors)

Atlanta, GA

- Relevant Coursework: Information Security Policies, Applied Cryptography, Intro to malware reverse engineering, Advanced Network Security, Secure Computing Systems, Critical Infrastructures Security and Resilience, Defense Lab, Cyber Practicum

Graduate Teaching Assistant – CS 6725 Introduction to Information Security Policies

Pune Institute of Computer Technology

Aug 2016 – Nov 2020

BE Electronics and Telecommunications (Grade: First Class with Distinction)

Pune, India

Technical Skills

Operating System: GNU/Linux (Pentesting) , Windows (primarily for malware analysis)

Languages: Python, C, C++, SQL, Bash, PowerShell

Security Tools: Volatility3, Wireshark, Metasploit, Burp Suite, IDA Pro, Ghidra, GDB, Angr, Splunk, Xways, FTKImager, SQLite, Velociraptor, YARA, snort3

Frameworks/Others: Android Studio, Gitlab, Jenkins, Docker, NIST 800-53, NIST 800-171, ISO 27001, MITRE ATT&CK, AWS

Experience

Stroz Friedberg, an Aon company

Jun 2023 – August 2023

Cyber Summer Associate

Washington, DC

- Conducted a detailed analysis of Remote Access Tools including ScreenConnect and AnyDesk, resulting in the integration of 30+ unique Indicators of Compromise (IoCs) into Aon's SIEM tool, enhancing 35% incident response efficiency
- Performed comprehensive host-based analysis on over 70 digital forensic images using tools like X-ways, EnCase, and FTKImager, while also examining Firewall logs, network captures, event logs, and O365 environments for a threat hunt to identify potential Adversarial Tactics, Techniques, and Procedures (TTPs)
- Assisted in reversing malware during a critical ransomware case, conducting static analysis with IDA Pro under a senior analyst's guidance
- Developed Python and PowerShell scripts to automate essential processes in ransomware engagements and threat hunts, significantly reducing the manual workload, enhancing operational efficiency

Information Sharing and Analysis Center

Dec 2021 – May 2022

Computer Forensics Engineer - Research Intern

Delhi, India

- Conducted comprehensive threat analysis by capturing live memory dumps using Volatility3 and LiME, identifying and mitigating potential threats. Utilized IDA Pro for in-depth threat assessment, contributing to technical analysis and problem resolution
- Developed and successfully written/modified 5+ exploits for Windows OS as part of the OpenCTI team to evaluate, test, and integrate new security controls.
- Created and rigorously tested 200 specialized labs for ISAC's virtual Capture The Flag (CTF) events, covering a diverse range of challenges including Web App Security, Cryptography, and Binary Exploitation

WattleCorp Cybersecurity Labs

Aug 2021 – Sep 2021

Vulnerability and Penetration testing Intern

Bengaluru, India

- Performed vulnerability assessments and penetration tests on 6 assigned systems and IoT devices, identifying and reporting critical security vulnerabilities, thereby contributing to the tuning and design of systems infrastructure for enhanced security

Projects

Living off The Land Attacks: Application IoC Generator

Aug 2023 - Present

- Developed a Python-based tool, open-source PoC for generating Indicators of Compromise(IoCs)and Sigma detection rules, targeting dual-use tools to prevent Living-off-The-Land attacks
- Enhanced Threat Intel Feeds, including PyMISP and IntelOwl, through the contribution of a Python-based project, achieving a 60% acceptance rate for pull requests. This outcome facilitates further integration with SIEM/EDR tools, streamlining incident response analysis

Sending Email from a Residential ISP, CS 8803-EMS

Sep 2022 - Dec 2022

- Led an experimental study under Prof. Paul Pearce, focusing on the practical aspects of sending an email using a residential IP address, with an emphasis on real-world application and user experience
- Conducted extensive tests across 10 prominent mail servers, providing insights into email server performance and reliability in home internet setups

Malware HomeLab

Sep 2022 - Dec 2022

- Engaged in solving complex challenges on platforms like Root Me, CrackMes.one, and Pwnable.kr, and gained practical experience in reverse engineering major malware threats, such as Michelangelo.1, DOS-7,Harulf, SQLSlammer,Lucius,etc
- Established a sophisticated home lab equipped with tools like IDA Pro, Ghidra, and x64dbg for malware analysis, alongside participation in the NSA Codebreaker Challenge('22/'23), contributing to Georgia Tech's #1 winning team

Certifications

CompTIA Security+

HackTheBox Certified Pentester

Google Cybersecurity Professional Certificate

Certified Encryption Specialist

CompTIA + TryHackme

HackTheBox

Google (Coursera)

EC Council
